What Liquozone Is.

Liquozone is the result of a process which, for more than twenty years, has been the constant subject of scientific and chemical research. Its virtues are derived solely from gas-largely oxygen gas-by a process requiring immense apparatus and fourteen days' time. Each cubic inch of Liquozone represents the virtues of 1,250 cubic inches

The result is a product which does what oxygen does. Oxygen is the nerve food, the blood food, the scavenger of the blood. It is the very source of vitality, the most essential element of life. But oxygen is a gas and unstable; while Liquozone is fixed and concentrated. It gets an excess of oxygen virtues into the blood, to go wherever the blood goes. The result is a vitalizing tonic with which no other known product can compare.
